

Our new stable Hayholder provides a more natural feeding position for your horse whilst also helping to prevent contamination and wastage of food.

Before you start

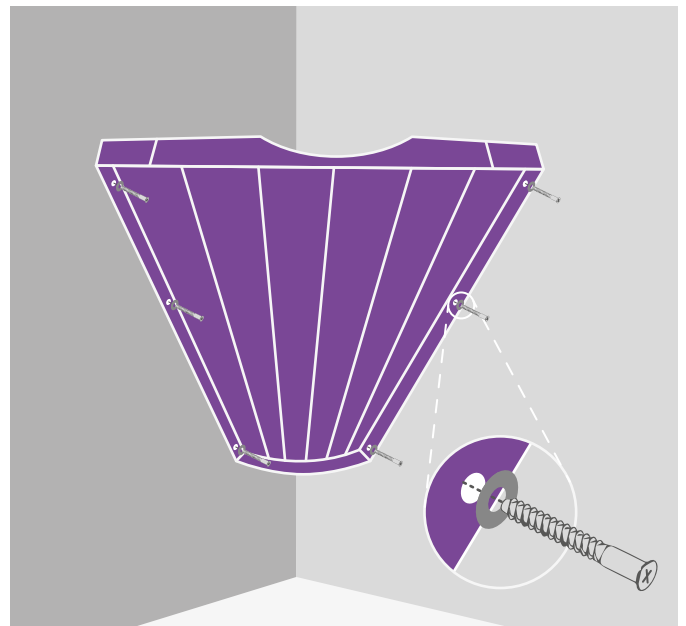

Ensure you have all the tools required to hand and get someone to help you where possible.

Tools required:

- Drill
- Screwdriver
- Pen for marking
- Appropriate fixings dependent on wall type

01 Measure required height (for your horse or pony) and mark the wall. Drill six holes in the plastic from the back first. Then using these holes, drill into the wall at the position marked

02 Fix Hay Holder to the wall using the appropriate fixings for the wall type. Make sure washers are on top of the product to ensure the screw doesn't go right through.
